

# FUSION ACUITY

**Fusion Acuity is a configurable contract settlement system, developed to handle extremely complex variables and millions of settlement transactions, enabling users to stand up complex contracts in a dynamic business environment quickly, accurately, and with greater insight than ever before. The net effect = you can expand your market options and go after the business opportunities you want.**

Fusion Acuity increases revenues and profits by enabling you to see your customers and your business opportunities more clearly. This revolutionary product allows you to model, refine, create, negotiate, and execute extremely complex contracts quickly so you can point your product to the customer who delivers the greatest profitability to your business. In addition, the product allows you to consolidate vast amounts of data from disparate points of your business and post out financial transactions to a centralized location – allowing everyone to see the same data, the same way!

Fusion Acuity features a configurable workflow to meet your business process needs. It also has event notification capabilities so your staff and management are more efficient in responding to system initiated events and critical response triggers.

Fusion Acuity is highly configurable and can grow as you do, resulting in information technology savings because you won't have to cobble and maintain a multi-system solution. Fusion Acuity flexes with your environment, ensuring consistent controls and reliable security to meet all regulatory, compliance and/or audit requirements even in tightly controlled and scrutinized industries.

With Fusion Acuity, you can get in front of your business and manage your demand chain seamlessly and profitably. Just imagine what you can achieve when you can clearly see the opportunity before you, the business in hand, and where you want to head next. *Rethink Opportunities, Realize Possibilities with Fusion Alliance.*

# FUSION ACUITY

## Why Fusion Acuity?

### FLEXIBLE

- A flexible and configurable solution that enables quick and cost effective implementation of new contracts.
- A powerful reporting engine that enables you to build and generate custom reports to manage complex charge calculations that support operations, strategic decision making and customer service.
- Increased flexibility in negotiating contract terms and pricing by not being limited to system constraints.
- The powerful formula builder and interpreter processes billions of dollars per month using complex charge formulas with user defined charge components; resulting in flexible pricing with consideration for contract parameters and the changing business environment.

### STREAMLINED

- A configurable workflow to meet your business process needs.
- Event notification capabilities so staff and management are more efficient in responding to system initiated events and critical response triggers.
- Ability to consolidate vast amounts of data from disparate points of the business and post out financial transactions to a centralized location – allowing everyone to see the same data, the same way!

### SMART INVESTMENT

- Ability to stand up complex contracts in a dynamic business environment quickly, accurately and with greater insight than ever before, opening the door to expanding market opportunities.
- Increased revenues and profits through the ability to model multiple contract scenarios and assess revenue and profit impacts.
- Reduced Information Technology costs due to system flexibility and configurability.

### MANAGES RISK

- A single application manages contracts with complex pricing and settlement rules, and has all required security and controls to meet Sarbanes Oxley compliance.
- Ongoing compliance is maintained as the system flexes with changes to regulatory tracking and reporting requirements.

### SUPPORTED BY AN EXPERT PARTNER

- Supports your ability to address changes to your system to meet “industry best practices”.
- Solution is configured and optimized within the constraints of the business environment, with consideration for existing systems and models. The goal is to provide innovative solutions that satisfy your business goals, fit your technical environment and meet your requirements.
- Implementation flexibility – from hosted to in-house solutions.
- A variety of value post deployment services and offerings are available – from help desk to maintaining the application to contract generation.
