

FUSION COMTRAC

Fusion ComTrac is a web-based commodities management system that is a flexible and configurable solution for handling commodity management throughout the lifecycle of a commodity. Although it was born in the utilities industry to track coal and the other bulk commodities used to generate electricity, its potential for wider spread application is high. The completely configurable solution is web-enabled, rapidly deployable, and built on an open architecture.

Fusion ComTrac gives companies, within the energy vertical and beyond, a new ability to dial in their processes, model alternatives, and get in front of their operations – with a clear view of the entire system. All this, while processing billions of dollars per month.

As a holistic perspective on the supply chain comes into clearer view, your industry becomes more rewarding, job satisfaction increases, meaningful innovation takes place, and people throughout your system benefit. Fusion ComTrac users increase profits, experience significantly cleaner cash flow, have tighter control over their variables, and are significantly better able to see beyond their own businesses to consider the terrain of their industry, and to chart their courses accordingly.

For more than half of the top utility industry leaders, Fusion ComTrac has proven to be a revolutionary tool in supply chain management. Just imagine what it could do for your Industry or business. *Rethink Opportunities, Realize Possibilities with Fusion Alliance.*

Fusion Alliance

FUSION COMTRAC

Why Fusion ComTrac?

BETTER SYSTEM

- Product integration from contract through settlement.
- A flexible and configurable solution to manage all aspects of commodities management, including contracts, pricing, inventory, quality, settlements, accounting and reporting.
- One solution that can manage multiple commodities and multiple operating companies for the same enterprise.
- Web-enabled application that yields rapid and effective product deployment.
- Ability to model multiple contract scenarios and assess revenue and profit impacts.
- Reduced Information Technology costs due to system flexibility and configurability.

FLEXIBLE

- Powerful formula builder and interpreter processes billions of dollars per month using complex charge formulas with user defined charge components; resulting in flexible pricing with consideration for contract parameters and the changing business environment.
- Pricing that allows consideration for penalties and premium adjustments, index values, surcharges, and origin or destination adjustments.
- Flexibility in negotiating contract terms and pricing without being limited by system constraints.
- Enhanced ability to add new commodities to be managed.
- Flexible end-user reporting and analytics that support operational and strategic decisions with timely information.

ACCURATE

- Powerful framework allowing a single system to maintain accurate inventory levels for all commodities whether the transaction is a purchase, sale or a brokerage deal.
- Data entry at the source minimizes total data entry effort and reduces opportunities for error.

STREAMLINED

- Self invoicing capabilities streamline and expedite invoicing and payment processing.
- Real-time interfacing with external suppliers, transportation companies and utilities.
- Multi-company processing supports multiple operating companies and merger & acquisition transactions.
- Event notification capabilities so your staff and management are more efficient in responding to system initiated events and critical response triggers.
- Ability to consolidate vast amounts of data from disparate points of your business and post out information and financial transactions to a centralized location – allowing everyone to see the same data, the same way!

MEETS REGULATORY HURDLES

- ComTrac has implemented the financial controls to ensure compliance with Sarbanes Oxley and has passed both internal and external control and compliance audits.
- Ongoing compliance is maintained as the system flexes with changes to regulatory tracking and reporting requirements.
- Works with the customer situation to manage onerous regulatory reports at the touch of the button.

SUPPORTED BY AN EXPERT PARTNER

- Supports your ability to address changes to your system to meet “industry best practices”.
- Solution is configured and optimized within the constraints of the business environment, with consideration for existing systems and models. The goal is to provide innovative solutions that satisfy your business goals, fit your technical environment and meet your requirements.
- Implementation flexibility – from hosted to in-house solutions.
- A variety of value post deployment services and offerings are available – from help desk to maintaining the application to contract generation.
